

Ballarat Health Cancer Unit

Designed by architects Billard Leece, Prebuilt Commercial constructed a six module health care unit to house cancer patients in the regional town of Ballarat, Victoria. The building consists of kitchen, bathroom, bedroom and living spaces, along with disabled facilities in one of the units.

This prefab metal building project was a full turn-key solution that integrated service connections, excavation works and modular building construction. Using quality materials and incorporating different design elements makes the space a welcoming respite for patients.
